ABSTRACT

During the 1972-73 water year:

Reinfall was above average for the first time in three years.
Ground water became more abundant through the increase in natural replenishment at Whittier Narrows.
The total amount of water used to meet all water requirements decreased.
The Superior Court approved a revision to the Judgment which provided a new Exchange Pool price formula.

The flexibility rule for computing allowable carryover or overextraction was revised by the Watermaster.

One hundred and fifty-nine water right sale and lease agreements were processed.

Thirty-five parties overextracted a total of 1,898.54 acre-feet, and twenty-six by less than the limit established by the Judgment. Nine exceeded the limits but have either purchased sufficient water from the 1973-74 Exchange Pool, or have initiated steps to eliminate their overextractions. No parties were cited for violation of the Judgment.

Item	Water Year	
	1971-72	1972-73
Parties	327	313
Active pumpers	269	248
Active nonparties	20	19
Allowed Pumping Allocation, in acre-feet	217,367.00	217,367.00
Watermaster expenses	\$ 58,288.52	\$ 69,292.59
Watermaster expenses, per acre-foot pumped	\$.27	\$.34
Rainfall, in inches	6.51	18.95
Injection at barrier, in acre-feet	4,994.00	5,180.00
Spreading operation, in acre-feet	70,811.00	158,731.00
Extractions, in acre-feet	215,943.00	205,503.00
Imports, in acre-feet	196,619.00	182,331.00
Exports, in acre-feet	<u>- 35,400.00</u>	<u>- 34,887.00</u>
TOTAL WATER USE, in acre-feet	377,162.00	352,947.00

FOREWORD

The Department of Water Resources, as Watermaster for the Central Basin, submits this annual report as a comprehensive review of water supply conditions in the Basin during the 1972-73 water year. This report was prepared for the Superior Court in the County of Los Angeles, and for the parties to the Central Basin Judgment, whose provisions authorize its publication.

The Central Basin is administered by the Department as a watermaster service area in accordance with Part 4, Division 2, of the California Water Code. The basin has been operating for several years under a well-defined management plan that limits and monitors ground water extractions.

This report contains information on ground water extractions, use of imported water, recharge operations, the administration of the Exchange Water Pool, and a financial report on watermaster service during the 1972-73 water year.

Jack J. Coe
Acting District Engineer

Figure 1. CENTRAL BASIN

I. THE CENTRAL BASIN

The Central Basin is a relatively large ground water basin underlying the southeastern part of the Los Angeles Coastal Plain. The basin is bounded on the south and west by the Newport-Inglewood Uplift, and on the north by the hills between the Coastal Plain and the San Gabriel Valley, and on the east by the Orange County line. A general outline of the basin is shown in Figure 1.

Most of the 227 square-mile basin supports an urban-suburban culture, there being 23 incorporated cities within the basin. A substantial portion of the water needed by the cities is pumped directly from the underlying basin.

Some twenty years ago an overdraft of the ground water basin resulted in declining water levels which triggered sea water intrusion and threatened the ground water supply. Timely legal action halted the overdraft and prevented serious damage to the basin. Today, ground water use in the Central Basin is restricted by a Superior Court Judgment and monitored by a court-appointed Watermaster. The Watermaster's prime duty is to administer the controls prescribed by the Judgment and to report annually to the Court and parties on significant ground-water-related events that occur in the Basin. The Basin has been operated under the management of a Watermaster for seven years.

History of Water Resources Development

One hundred years ago, the Los Angeles Coastal Plain was poised on the threshold of a development boom. The key to the future of the Central Basin was water.

The definite shortage of adequate year-round surface water supplies in the Central Basin forced the early development of ground water sources. As early as 1870, water users had tapped the artesian wells and springs east of the Newport-Inglewood Uplift. When the artesian wells ceased to flow, water users were forced to drill small wells for reliable water supplies. These small wells easily supplied enough water to continue the economic growth of the Basin.

Ground water development spurred dramatically ahead in 1909 with the advent of the deep well turbine pump. Tremendous adaptability and superior operating characteristics of the new pump placed efficient water wells within economic reach of everyone. Reliable water supplies attracted industry and agriculture. Each new business required water. Eventually, the demand for ground water exceeded the natural replenishment of the Central Basin.

The resulting overdraft was clearly indicated by dropping ground water levels and a few small areas of sea water intrusion. The rapidly increasing cost of pumping ground water and an occasional well failure because of dropping water levels were the chief economic reasons for the keen interest in the Central Basin's serious ground water problem.

The deteriorating ground water situation in the Central Basin and the adjoining West Coast Basin prompted interested water users to form the Central Basin Water Association in 1950. A plan to manage the Central Basin's resources began to materialize. The plan would:

1. Provide a supplemental water supply to major producers.
2. Limit ground water extractions from the Central Basin.
3. Create an exchange water pool to provide ground water pumping rights for water users without access to other supplemental water supplies.

Phase I was realized in 1952 when the Central Basin Municipal Water District was formed to distribute water from the Colorado River. The District was annexed to The Metropolitan Water District of Southern California in 1954, and Colorado River water soon was flowing into the Central Basin.

The West Basin Water Association and the Central Basin Water Association were largely responsible for the creation of the Central and West Basin Water Replenishment District in 1959. This special District covers 420 square miles of the Central and West Coast Basins (Coastal Plain) of Los Angeles County. The District's objective is to replenish and maintain the ground water basins by purchasing imported water to recharge the Basin and halt sea water intrusion. The District financed this program during the 1972-73 water year by placing a tax of \$9 during the first nine months and \$11 the last three months on each acre-foot of ground water extracted within the District's boundaries.

On January 2, 1962, the Central and West Basin Water Replenishment District filed Case No. 786,656 in the Superior Court, County of Los Angeles, naming more than seven hundred parties. The Plaintiff's objectives: quiet title to rights to the use of ground water; and regulate withdrawals from the Central Basin to protect the water supply from deterioration.

Adverse ground water conditions, and the indefinite period before a final adjudication could be expected, prompted the Central Basin Water Association to draft an interim agreement curtailing extractions from the basin. By September 1962, a proposed interim agreement had been approved by a sufficient number of water producers (producers owning over 75 percent of the Assumed Relative Rights within the basin) to guarantee control over ground water pumping in the basin. On September 28, 1962, the Court signed the "Order Pursuant to Stipulation and Interim Agreement and Petition for Order" and appointed the Department of Water Resources as Watermaster.

In order to avoid the protracted litigation experienced in other watermaster service areas in Los Angeles County, the attorneys representing principal parties held monthly meetings to work toward settlement of the action. A stipulated judgment was drafted by the attorneys at these meetings. Signatures of approval obtained from public utility water companies and other producers represented well over 200,000 acre-feet (75 percent) of the total rights within the basin. This was a prerequisite to filing the stipulated judgment with the Court.

A pretrial was held in March, and on May 17, 1965, the case went to trial before the Honorable Edmund M. Moor. After a week's testimony on engineering, geology, hydrology, safe yield of the basin, and arguments on water right entitlements, the case was continued to August 25, 1965. Shortly thereafter, Judge Moor appointed the California State Department of Water Resources, Watermaster. The final Judgment was signed on October 11, 1965, and became effective on October 1, 1966.

Watermaster Service

Watermaster Service is administered by the California Department of Water Resources in accordance with Part 4, Division 2, of the California Water Code. Watermaster Service Areas are created by the Department either at the request of water users or by order of the Superior Court. The first Watermaster Service Area was formed in September 1929. Currently, there are 19 such areas controlling the surface water diversions in Northern California and 4 in Southern California controlling ground water extractions.

Once a month, every ground water pumper reports his ground water extractions to the Watermaster. This makes possible updating of his water right account (Watermaster Production Summary) by computing the amount pumped during the previous month, the total amount pumped during the current water year, and the amount that can legally be pumped during the remainder of the year. A copy of the Watermaster Water Production Summary is mailed to the pumper each month.

If electric meter readings are reported along with water meter readings, electric power consumption can be correlated with water production. Erratic or rapidly increasing electric power consumption vs. water production, for instance, may suggest an inefficient pump, system losses, or an inaccurate water meter. In this manner the summary occasionally indicates malfunction of pumps or water meters.

The Watermaster field staff calibrates the water meter on every active water well at least once every two years. Accurate measurement of ground water extractions is absolutely necessary to the success of the Basin's management plan. All available means, including system efficiency tests, are

used to confirm water meter test results. One copy of each test is furnished to the well owner and inaccurate meters must be repaired within thirty days. Follow-up tests on repaired meters and initial tests on new wells are scheduled whenever necessary. Parties may also request a meter test at any time.

During the 1972-73 water year, the Watermaster evaluated historical ground water production records of several parties. All of the reviews were routine and resulted in minor uncontested changes in the record.

Central and West Basin Water Replenishment District

The Central and West Basin Water Replenishment District (C&WBWRD) is a very active water conservation organization in Los Angeles County. The District is responsible for replenishing the underground water supply of both Central and West Coast Basins.

The creation of water replenishment districts is a statutory procedure established by the California Legislature. Division 18 of the California Water Code describes the duties and obligations of a water replenishment district. Such districts have powers very well suited to solving ground water problems whether the problem be quality or quantity oriented.

The Central and West Basin Water Replenishment District is comprised of a Board of Directors and a small staff to carry out the directives of the Board. The District is actively engaged in several replenishment programs. These programs (i.e., water spreading, barrier operation, and in lieu replenishment) are described in this report. The District also

publishes an annual report of its yearly operations during February or March of each year. Additional information about the District can be obtained from its staff at 7439 East Florence Avenue, Downey, California 90240, phone: 773-5790.

The Watermaster cooperates very closely with the Central and West Basin Water Replenishment District for many reasons: (1) Watermaster Service areas in Central and West Coast Basins closely coincide with the District boundaries; (2) both the District and the Watermaster

are required to record all ground water extractions from the basins; (3) the District was the Plaintiff in the Central Basin Water Rights Case, (Case No. 786,656, Superior Court, Los Angeles County); (4) both the District and the Watermaster are concerned with the usefulness of the ground water basins on the Coastal Plain.

Many of the Watermaster's data collection programs are coordinated with the District to prevent duplication. Hence, your monthly or quarterly water well report is mailed to the District and forwarded by the District to the Watermaster.

II. WATER SUPPLY CONDITIONS

Water from many sources is required to serve the needs of Southern California's thriving urban economy. Water from the Colorado River and Owens River, Northern California, runoff from mountains, ground water, reclaimed waste water, and desalination plants along the coast contribute to one of the largest water supply systems in the world. Northern California water became available to the area during the past year.

Precipitation

Southern California enjoys a Mediterranean-type climate characterized by hot dry summers and sparse precipitation during the winter months. The average rainfall on the Central Basin

during 1972-73 was 18.95 inches (41 percent above normal). During the past three consecutive years the annual rainfall was less than normal. The mean seasonal precipitation (base period 1897-1947) varies from 12 inches at Long Beach to 16 inches at Whittier Narrows. The locations of the precipitation stations, used to measure rainfall, and the annual amount recorded are shown on Figure 2.

Local precipitation in the basin does not influence the ground water supply of the Central Basin to any great degree. A layer of impermeable material lies between the surface and the producing aquifers except in the forebay areas. As a consequence, very little of the annual

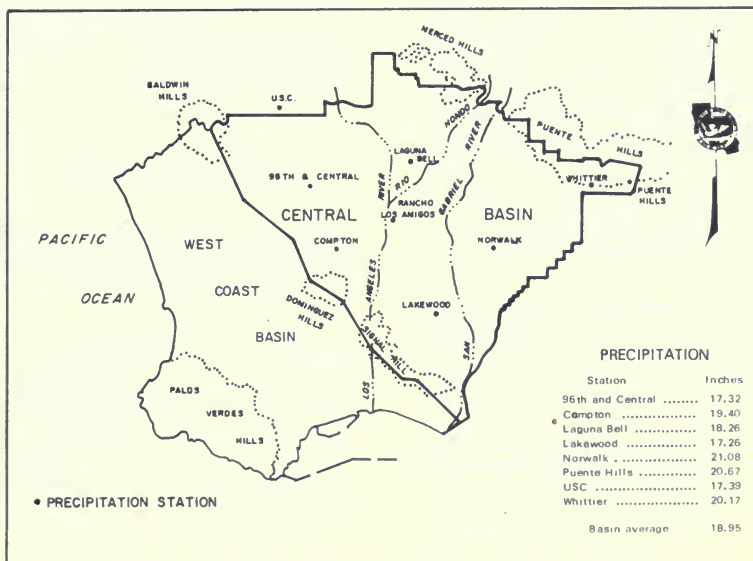

Figure 2. PRECIPITATION STATIONS

rainfall reaches the zones from where it can be pumped back to the surface. The above normal rainfall (about 116 percent of normal) in the nearby San Gabriel Mountains produced abundant runoff which was subsequently captured at the Whittier Narrows to the benefit of the Central Basin.

Ground Water Recharge

Natural replenishment of the basin's ground water supply is limited to inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Some of the water that percolates into the forebay areas of Central Basin eventually crosses the Central-West Coast Basin barrier and into the West Coast Basin. For several years now, outflow and extractions have exceeded natural replenishment, thus upsetting the basin's balance.

Today, attempts are being made to re-establish nature's balance. One method of artificial replenishment is water spreading. Water is flooded on areas where it can percolate into the underground aquifers and supplement the natural recharge supply. Large quantities of water can be returned to the ground by spreading water, but the process is limited by the space available for spreading facilities and the ability of the recharge aquifers to transmit water back to the basin.

The large quantities of runoff during 1972-73 resulted in an excellent year of record for the conservation of local runoff. Storm runoff conserved was 188 percent of the storm runoff conserved the year before, while the purchased water spread was 242 percent of the amount purchased and spread last year. The total amount of supplemental water purchased was 2.5 times the local runoff.

The Los Angeles County Flood Control District (LACFCD) operates spreading grounds along the Rio Hondo and San Gabriel Rivers in the Montebello forebay of the Central Basin; see Plate 1 on page 15. The entire spreading operation is summarized in Table 1.

TABLE 1. SPREADING OPERATIONS^{a/}

Water Source	Quantity, in acre-feet	
	1971-72 Water Year	1972-73 Water Year
Local runoff	23,776 ^{c/}	44,839 ^{c/}
Reclaimed water: Whittier Narrows San Jose	17,543 --	13,602 8,327
MWD water purchased: With Central and West Basin Water Replenishment District funds	29,490	71,947
By Central Basin Municipal Water District ^{b/}	0	20,000
Makeup water from Upper San Gabriel Basin	0	0
TOTALS	70,811	156,731

a/ Information provided by the LACFCD as to amount actually spread in Montebello Forebay Area.
b/ With funds from Long Beach action.
c/ Includes rising water.

Alamitos Barrier Project

The Alamitos Barrier Project designed to prevent sea-water intrusion into the fresh aquifers of the Central Basin is of great importance to water users in the Central Basin.

Sea-water intrusion at the mouth of the San Gabriel River (Alamitos Gap) poses a serious threat to the ground water supply. This area has seven water-bearing zones identified in downward order as the Recent aquifer, C-Zone, B-Zone, A-Zone, I-Zone, Main (Silverado) aquifer and Lower Zone (Sunnyside) aquifer.

Sea-water intrusion occurs through the Recent Zone, which is very permeable and open to the sea. The C, B, A, and I Zones merge with the Recent Zone and are therefore susceptible to intrusion, which is notable by the varying degrees of salinity occurring in water found in each zone. The saline water intrusion was detected as far as 10,000 feet landward of the Newport-Inglewood fault zone, and if unchecked, could extend into the Silverado and Sunnyside aquifers which are the principal ground water producing zones in the basin.

The Los Angeles County Flood Control District successfully operates a combination saline water extraction trough and fresh water pressure ridge to halt intrusion. In addition to the extraction wells and injection wells required, a number of observation wells are also part of the project. These provided geological data along the barrier, and are currently being used to monitor ground water levels and water quality in this area. The information from this monitoring program will be utilized in determining if additional barrier facilities are necessary. Since operations of the barrier began in 1965, the sea-water intrusion problem has been effectively contained. The location of the barrier is shown on Plate 1, page 15. Table 2 shows the scope of the project. In January 1973, water from the State Water Project was injected for seven days.

TABLE 2. BARRIER OPERATIONS^{a/}

Aluminate Gap Operation	Quantity
Quantity injected, in acre-feet	5,180 ^{b/}
Quantity extracted, in acre-feet	972
Average injection rate, cubic feet/second	7.15
Average extraction rate, cubic feet/second	1.34
Number of extraction wells	4
Number of injection wells	18
Number of observation wells	202
Wells to be added during 1973-74	
Injection	0
Extraction	1
Observation	0

^{a/} Furnished by LACFOO

^{b/} Orange County Flood Control District participated in 17,008 of the total injected water during the 1972-73 water year.

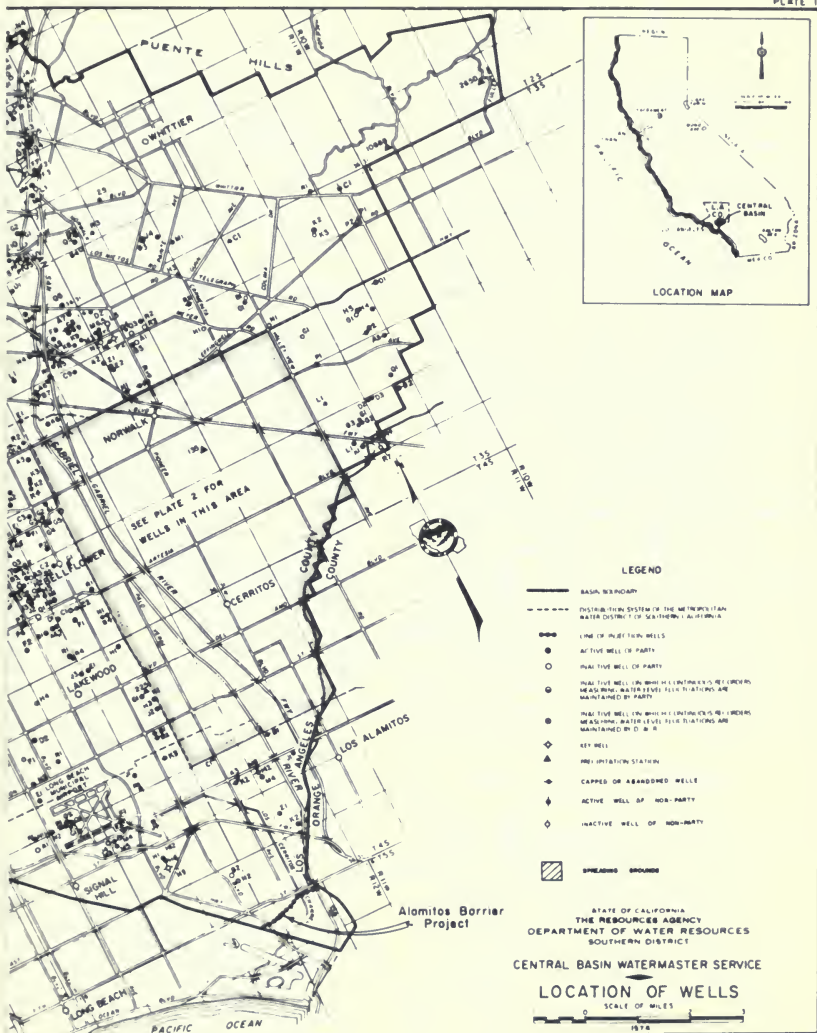

Water Quality

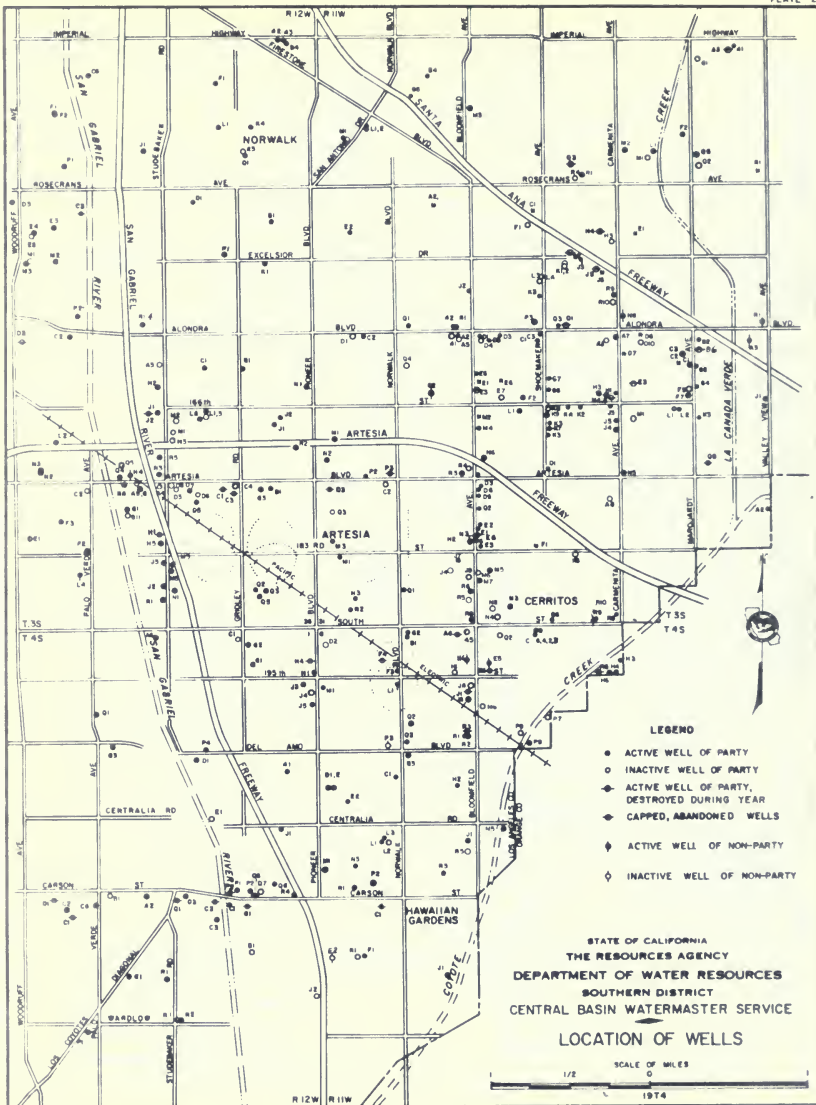

The battle for good quality water in the Central Basin began many years ago. In fact, it was essentially a water quality problem that prompted the Central Basin litigation. Many of the aquifers underlying the Los Angeles Coastal Plain are separated from each other by impervious material. However, some of the aquifers are hydraulically connected to the ocean, so occasionally one or more adjacent aquifers may become impaired by sea water. If a well is drilled downward through two aquifers, one clean, one polluted, without using proper casing techniques, water can move from the polluted aquifer to the unpolluted one.

To prevent such occurrences, the Department of Water Resources conducted an intensive investigation that culminated in the publication of recommended standards for water well construction and destruction.^{1/} Adoption hearings on these standards were held in 1969 by the Los Angeles Regional Water Quality Control Board and it now reports that all local agencies and municipalities in the Central Basin have adopted them.

One of the most important pieces of legislation enacted by the 1969 Legislature was the Porter-Cologne Water Quality Control Act (Water Code, Division 7, commencing with Section 13000), effective January 1, 1970. This Act made extensive revisions in California's water quality control laws and is one of the most stringent in the nation.

1/ DWR Bulletin No. 74, "Water Well Standards; State of California, February 1968; and DWR Bulletin No. 74-4, "Water Well Standards - Central, Hollywood, Santa Monica Basins, Los Angeles County," August 1968.

The regional boards can now enforce discharge requirements without showing the existence of conditions of pollution or nuisance. If a discharger violates requirements of the Boards, and no action is taken to correct deficiencies in discharge, the Board may request enforcement by the Attorney General. Violations of a regional board cease and desist order could result in a maximum fine of \$6,000 for each day of violation.

Solid waste disposal has become a major problem in Southern California during the past 25 years. Today, the average Californian is generating five pounds of solid waste every day of the year which must be disposed of somewhere. Suitable dumpsites are becoming more difficult to find -- particularly in urban areas. In recent years, tremendous pressure to use abandoned gravel pits for dumpsites has materialized.

Fortunately for water users, there is an intense, well-organized campaign against such practices throughout the Los Angeles area. The Central and West Basin Water Replenishment District, Central Basin Water Association and various other agencies have vigorously opposed all applications for permission to operate sanitary landfill programs in the Central Basin. Opposition to the use of gravel pits as dumpsites will undoubtedly continue until fool-proof sealing methods are developed to prevent pollution of ground water by leachates.

A report published by the State of California, Department of Public Health, Bureau of Sanitary Engineering, entitled "Investigation of Ground Water Quality Problems in the Central Basin of Los Angeles County - July 1968" discusses many of the ground water quality problems that may already, or will in the future, face water users in the Central Basin.

Basinwide Water Quality Monitoring

In compliance with the Beilenson Health Act, the Central Basin Water Association initiated a basinwide plan to monitor quality of water being pumped for domestic use. The requirements of the Act apply to each domestic water purveyor having 200 service connections or more. The plan as developed by the Association is a joint plan which has been accepted and approved by the State of California, Department of Health on November 9, 1973.

Title 17 of the Administrative Code, more particularly Part 1, Chapter 5, Subchapter 1, defines the limits of the trace elements and pollutants acceptable for domestic water use. To properly monitor for the trace elements and pollutants, 44 purveyors have agreed to participate in the plan with the testing being performed by Clinical Laboratories of San Bernardino. The City of Los Angeles and California Water Service Company have elected to perform their own testing; however, they will cooperate by furnishing their test results to the Association for inclusion in the report to the State Department of Health. As of the acceptance of the Association's plan, five purveyors, who because of the total number of service connections are subject to the Act, have not indicated their desire to participate in the Association's plan.

In Lieu Replenishment

Seven years ago, during the 1965-66 water year, the Central and West Basin Water Replenishment District began a program of in lieu replenishment. The program is authorized by Section 60230 of the California Water Code. In effect, the Replenishment District was given the power to contract with any producer having access to supplemental water to have the producer use supplemental water

instead of pumping water from the ground.

The program may be used to: alter pumping patterns within a ground water basin; replenish areas of low transmissibility where conventional recharge techniques are ineffective; heighten the effect of injecting water to form a sea-water barrier by reducing extractions in the vicinity; reduce the amount of replenishment water purchased by the District; and reduce the annual ground water extraction from a ground water basin.

The California Water Service Company, in the West Coast Basin, has been thus far the only participant. The results of the program are summarized in Table 3.

TABLE 3. IN LIEU REPLENISHMENT PROGRAM ^{a/}

Water Year	Amount contracted in acre-feet	Contract price, dollars per acre-foot	Total Payment
1965-66	744.59	\$ 12.33	\$ 9,180.79
1966-67	850.57	14.14	12,027.06
1967-68	850.00	13.36	11,356.00

1972-73	901.28	20.78	18,728.60

^{a/} Information provided by the Central and West Basin Water Replenishment District.

Construction Projects Affecting Water Supply

Three major projects have significantly affected the water supply of the Central Basin: The State Water Project, the Metropolitan Water District's distribution system, and the second barrel of the Owens River-Mono Basin Aqueduct of the City of Los Angeles.

All have been completed within the past three years and are now providing a very beneficial service to the basin. MWD's Middle Cross Feeder began deliveries, on December 1, 1972, and is the main source of Northern California water into the basin. Water from the State Water Project was approximately 15 percent of the total water imported during 1972-73.

One other project of considerable interest to Central Basin water users is the Los Angeles County Joint Sanitation District's plan to reclaim wastewater. Considerable benefits from spreading reclaimed water in the forebay areas of Central Basin may eventually materialize. Reclaimed wastewater from the Whittier Treatment plant is spread in the recharge basin. On or about November 15, 1972, the San Jose Treatment plant began to supply reclaimed wastewater for spreading in the Montebello forebay area.

Ground Water Levels

Every water well owner in the Central Basin is concerned with the location of the ground water level since the cost of pumping water is largely dependent on the distance the water must be lifted.

Figure 3 shows water level information in the form of selected hydrographs. Location of these key wells are shown on Plate 1, page 15. These particular hydrographs are representative of the several aquifers underlying the basin. In general, they show that the water surface has stabilized and, in some cases, risen slightly because of recharge operations and changing extraction patterns.

Additional water level information is contained in the annual report published by the Central and West Basin Water Replenishment District.

Figure 3. FLUCTUATION OF WATER LEVEL ELEVATIONS
IN PRINCIPAL AQUIFERS

DEPARTMENT OF WATER RESOURCES SOUTHERN DISTRICT, 1974

III. WATER USE

During the 1972-73 water year, water purveyors in the Central Basin served more than 352,900 acre-feet of water to their customers. The basin contained 1,308 wells -- 745 active -- 343 inactive -- 18 injection and 202 observation. Six were drilled and 116 were destroyed. (See Appendix C.) The water service areas of the parties in the Basin are shown on Plates 3, 4, and 5, pages 22-27.

A rapid population increase in the Central Basin area has caused the water demand to increase substantially each year. Prior to 1961, ground water from the Central Basin served most of the demand. However, the Judgment reduced extractions to 217,367 acre-feet annually, so imported water rapidly became an important component of the area's water supply.

Figure 4 illustrates the ground water extractions and imported water use from 1952 to the present, less San Gabriel Valley imports. Much of the imported water demand during the past seven years may be attributed to the curtailment of ground water extractions.

Figure 5 provides another graphical analysis of the monthly relationship between rainfall, ground water extractions, and imported supplies. Note how climatic conditions affect the water demand.

Ground Water Extractions

The Central Basin Judgment limits the amount of ground water each party can extract annually (October 1 through September 30 of each year) from the Basin. This limit is referred to as the "Allowed Pumping Allocation" (APA). Recipients of exchange pool water may pump the amount released to them in addition to their APA. Table 4, page 28, is a balance sheet summarizing each party's "water account".

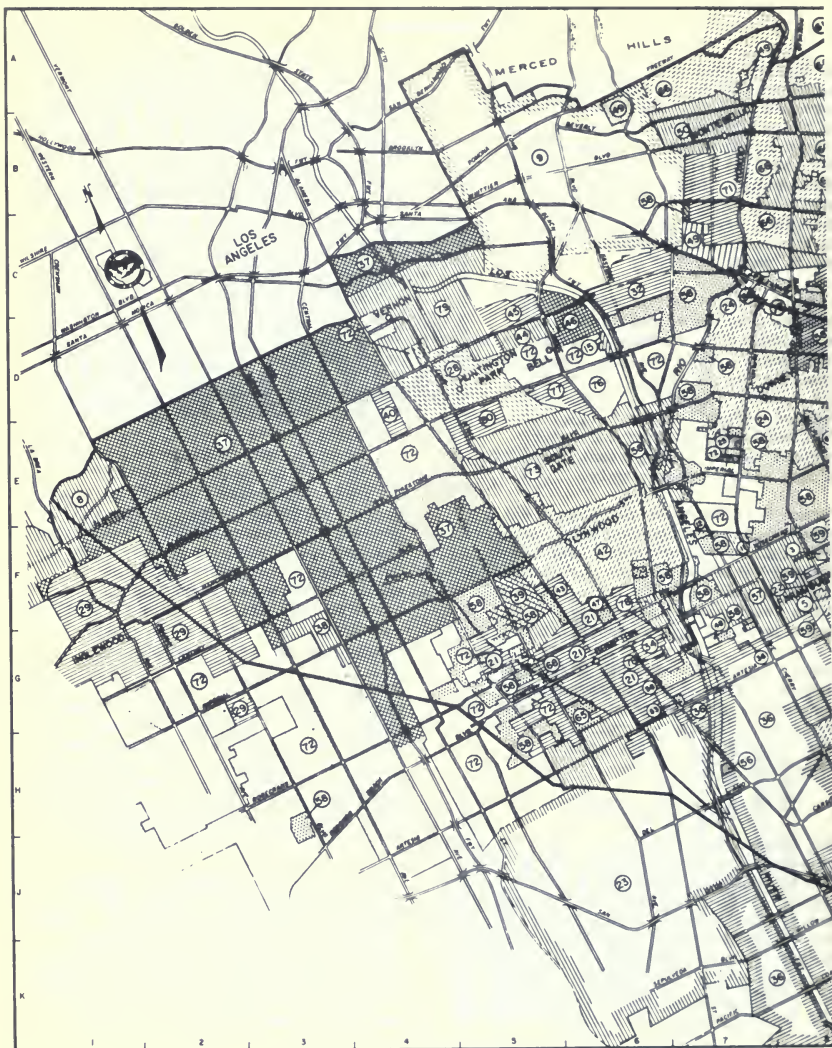

The metered ground water production from each active well in the basin is listed by party in Appendix B, Tables B-1 and B-2. Table B-1 lists parties that report on a monthly basis; Table B-2 lists parties that report on a quarterly basis. Normally, water wells producing more than 25 acre-feet per year must be equipped with a water meter and be reported monthly. Wells producing less than 25 acre-feet per year do not necessarily require a meter and may be reported on a quarterly basis. The location of the wells where ground water was extracted is shown on Plates 1 and 2, pages 14-16.

A numbering system designated as a State Well Number is assigned to all wells for identification. This system is explained in Figure 6, page 32.

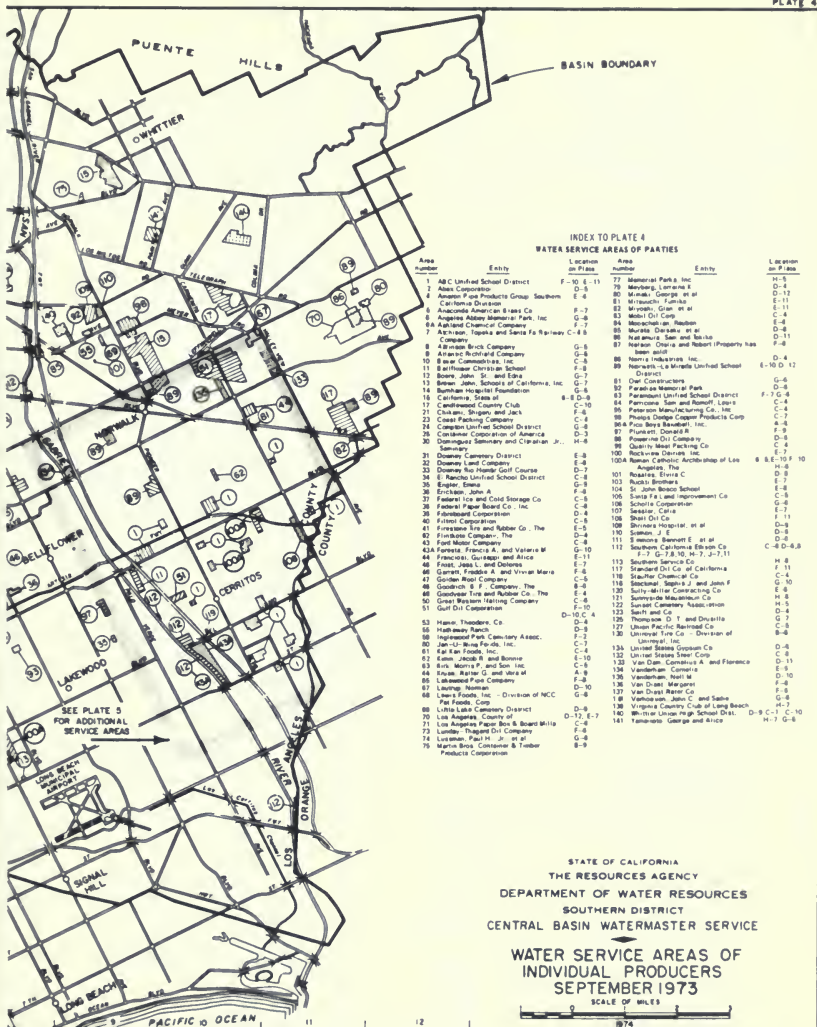

In order to provide flexibility in the control of ground water extractions, the Judgment contains provisions allowing the parties to carry over into the succeeding water year a portion of their unused water right and in some cases to overextract. This flexibility was necessary to meet unforeseen emergencies in water demands.

One provision allows parties to carry over from one water year to another any unused APA not to exceed ten percent of their APA or 10.00 acre-feet, whichever is greater. In addition, any unused exchange pool water can be carried over into the following water year. Chapter 4 contains additional information on this provision.

Parties are also allowed to overextract by 10 percent of their APA or 2 acre-feet, whichever is larger. Under certain circumstances, parties may overextract in greater amounts. However, prior approval of the Watermaster must be obtained and in any case, must be made up the following water year.

- a/ See Appendix A and Table 10 for information concerning leases, revised water entitlements, or prior ownership.
b/ Production reported monthly as well as quarterly in Appendix 3. See Tables B-1 and B-2.
c/ Includes Exchange Pool water carryover.
d/ Computed under old procedure.
e/ Includes allowable carryover of predecessors in interest.
f/ Includes extractions by predecessors in interest.
g/ Water right leased by predecessor in interest.
h/ The 1971-72 carryover was corrected.
i/ Juan De Cordova well used by Juan De Cordova, Southern California Edison Company, and Standard Brands Paint Company, Inc.
j/ Excludes 11.00 acre-feet charged to City of Torrance with transfer of water right.
k/ Includes 13.21 acre-feet extracted by Kotake from Well No. 7 on Norton Simon, Inc., Museum of Art property. Kotake is a tenant there.
l/ Includes extractions from Lakewood Golf Course well by Los Angeles County Parks and Recreation Department. Exchange Pool water is purchased to offset the extractions at Lakewood Golf Course well.
m/ Los Angeles County has an inter-agency water right exchange whereby all water right balances are combined and divided between the agencies in proportion to their needs or water right.
n/ Ray Mitchell is a nonparty and a tenant of Charles E. Adams and Kotake properties.
o/ Excludes 13.21 acre-feet; see footnote m.
p/ Includes extractions by Southern California Edison Substations.
q/ Exchange Pool water purchased or sold by predecessors in interest.

State well numbers that identify each water well in the Central Basin are derived from a system based on the U. S. Public Land Survey. Each number consists of township and range designation, a section number, a letter representing the 40-acre tract in which the well is situated, a sequence number indicating the chronological order in which the well number was assigned, and a letter

representing the base and meridian. The last letter is frequently omitted from well numbers in a single area because all wells there share a single base and meridian. Well numbers are assigned by the Watermaster.

The components of well No. 3S/11W-12C03S, for example, are identified in the following breakdown:

Figure 6. SYSTEM FOR WATER WELL IDENTIFICATION

Extractions by Nonparties

In order to keep the parties and the Court apprised of all ground water extractions within the Central Basin, the Watermaster collected information on nonparty ground water extractions shown in Table 5. The nonparties were not named in the Central Basin Judgment and as such are not under the jurisdiction of the Watermaster. During 1972-73, four nonparties previously reporting extractions, discontinued pumping and three began pumping.

Imported and Exported Supplies

Large quantities of water are imported to the Central Basin from other sources. Water from the Colorado River and State Water Project arrives through the facilities of The Metropolitan Water District of Southern California for distribution throughout the basin

by the Cities of Long Beach, Los Angeles, Compton, the West Basin Municipal Water District, and the Central Basin Municipal Water District. The City of Los Angeles also imports water from the Owens River-Mono Basin in east Central California. In addition, the City of Inglewood imports ground water from the West Coast Basin and California Domestic Water Company, San Gabriel Valley Water Company, Suburban Water Company, and the City of Whittier import ground water from the San Gabriel Basin. Exports from the Central Basin are very small when compared to imports. The City of Long Beach exports blended ground water, State Water Project and Colorado River water to the West Coast Basin, while the California-American Water Company, Dominguez Water Company, and the City of Signal Hill export ground water to the West Coast Basin. Imports and exports are listed in Table 6.

a/ Delivered for use in the Los Alamos Gap barrier.

b/ Includes 1652 acre-feet of Northern California water.

c/ Includes 618 acre-feet of Northern California water.

IV. ADMINISTRATION OF THE JUDGMENT

The Central Basin Judgment was a logical step toward preserving the usefulness of a valuable natural resource. It provides a flexible tool to limit extractions and still allow beneficial use of the ground water supply. However, restriction on extractions imposed by the Judgment forces the parties to look for other supplies. Fortunately, these are available. If they were not, the rapidly increasing demand for water might literally bankrupt the basin before other basin management techniques could be developed.

Exchange Pool

The Court and parties foresaw that adjudicating the water rights in the Central Basin and limiting the total extraction would not suffice all parties. For this reason, Part III, Subpart C of the Judgment authorizes an Exchange Pool to provide additional water rights for parties without a supplementary supply. Tables 7 and 8 summarize the 1972-73 Exchange Pool transactions.

Membership in the Exchange Pool is voluntary, and any party may join by filing with the Watermaster and the Court a "Notice of Intention to be Bound by the Exchange Pool". This notice is also contained on the Exchange Pool Offer or Request form.

On or about September 30 of each year, the Watermaster mails an Exchange Pool form to each party, requesting that the form be completed and returned to the Watermaster by November 10. The form provides for making: mandatory offers of water rights to the pool, referred to as "Required Offers" in the Judgment; voluntary offers; and request for water rights from the pool. In completing the form, the member must estimate his water needs and supply for the ensuing water year.

a/ Was a party when the Pool was open for requests.

A "Required Offer" must be made to the pool when a member has a connection to supplementary water and can obtain imported water from the Metropolitan Water District or the Central and West Basin Municipal Water Districts. The "Required Offer" is limited to 20 percent of the member's Allowed Pumping Allocation; except that the "Required Offer" plus the party's water needs for the year cannot exceed the party's total supply.

A "Voluntary Offer" may be made by any member of the Exchange Pool. The only requirement: the member's supply must exceed his estimated needs and only the difference may be offered. However, the Watermaster must first allocate all the "Required Offers" before using the "Voluntary Offers" in filling Category (a) Requests.

A Category (a) Request is defined as that quantity requested by a member which quantity is not in excess of 150 percent of its Allowed Pumping Allocation or 100 acre-feet, whichever is greater. Category (b) Requests are those requests which exceed the 150 percent or 100 acre-foot limitation. Whenever there are insufficient "Required Offers" to meet all Category (a) Requests, "Voluntary Offers" may be used in lieu of "Required Offers". Category (b) Requests are filled exclusively by Voluntary Offers.

Experience has been such that there have always been sufficient "Required Offers" to meet all the Category (a) Requests; as a result, no "Voluntary Offers" have been used to fill Category (a) Requests. It is doubtful whether "Voluntary Offers" will ever be used to meet Category (a) Requests. Consequently, very few "Voluntary Offers" are used in the Central Basin Exchange Pool. The only instances where "Voluntary Offers" are utilized are in those cases where requests exceed the 150 percent or 100 acre-foot limitation.

During the 1972-73 water year, there were four members to the Exchange Pool whose requests met these criteria.

A "Request" for Exchange Pool water right may be made when a member's estimated needs exceed his total supply, including leases.

The price charged for Exchange Pool water rights is fixed by Part III, Subpart C, Paragraph 10 of the Judgment. The price is based primarily on the cost of water from the Central Basin Municipal Water District (CBMWD) and the pumping tax set by the Central and West Basin Water Replenishment District. Since these prices vary from year to year, the cost of Exchange Pool water will likewise vary from year to year. (See "Court Actions 1972-73", page 46.)

The cost computation for the 1972-73 Exchange Pool is:

(1) Cost of CBMWD water	\$62	
(2) Plus	2	\$64

Less:

(3) Average cost of pumping	\$ 7	
(4) Replenishment assessment	9	\$16

Price per acre-foot for subscriptions utilized	\$48
--	------

Payments for Exchange Pool water rights are made in four equal monthly payments. The first payment is due to the Watermaster on or before December 31, and the remaining three payments on or before the last day of the next three succeeding months. After all payments are received for each month, the Watermaster then disburses the corresponding amount to the parties whose offers were sold.

Exchange Pool Carryover

The Central Basin Exchange Pool provides additional pumping rights to

parties at a relatively high price. The authors of the Judgment therefore believed that the parties should be allowed to pump their entire exchange water right purchases regardless of the provisions limiting carryover of water rights. Therefore, a specific exchange water carryover provision was drafted and included in the Judgment.

The clause specifically allows a party that purchased exchange water to carry over the unpumped portion of its allowable extraction until all of the exchange water is pumped. Table 9 lists each party that carried exchange water into the 1972-73 water year, the amount of water carried forward, and the additional costs. The charge is authorized by the Judgment and is based on the difference in the prices of exchange pool water between the year the water was purchased and the succeeding year. Table 4, page 28, also shows those parties having a carryover of exchange water from the 1972-73 to the 1973-74 water year.

Transfers of Allowed Pumping Allocations

The Central Basin Exchange Pool is not the only method of obtaining additional pumping rights. Each water year, there are a number of water right lease and sale transactions between parties. Table 10 lists leases, sales, parties, and amounts involved. Appendix A also records all sales of water rights between parties and shows the current ownership of Allowed Pumping Allocations by each of the parties as of September 30, 1973.

Suggested samples of water right lease and sale agreements are illustrated in Figure 7. The Watermaster recommends that all documents be prepared on an 8-1/2 x 11-inch sheet of paper. Any necessary additions to the recommended agreement may be attached to another page. You need not use these sample documents, but they are sufficient for most purposes.

The "General Information, Policies and Procedures" of the Watermaster Service in the Central Basin has been revised to read as follows:

"In order that a water right lease be in force (applicable) during a particular water year, it must have been executed by the parties involved before or prior to September 1 of the water year in question. In addition the executed water right lease document must be filed with the Watermaster no later than August 31 or postmarked August 31 of the year in question. Any otherwise valid agreement not filed with the Watermaster prior to September 1 of the water year in question will be void and of no force or effect for the transfer of water rights."

When property, on which water rights have been developed is sold, the Watermaster must be furnished a copy of the sale document. The sale docu-

ment is required for the proper accounting of the water rights. The Watermaster assumes that the water rights pass on to the new owner unless specifically reserved in the sale document.

In leasing, buying, or selling water rights, parties should be specific as to the type being exchanged; i.e., Total Water Right or Allowed Pumping Allocation. All leases should be entered into on the basis of Allowed Pumping Allocation, whereas sales should specify both amount of Total Water Right and amount of Allowed Pumping Allocation, each to the nearest whole acre-foot. All water right leases should be made on a water year basis; i.e., October 1 through September 30 of the following year.

Overextractions

Each year some parties extract more ground water from the Central Basin than they are entitled to. The overextractions are usually small, within

the tolerance set by the Judgment. Each party may overextract by 2 acre-feet or 10 percent of its Allowed Pumping Allocation, whichever is greater, on the premise that the overextraction will be eliminated during the following water year. Any overextractions above this limit must have prior approval by the Watermaster. Most overextractions are caused by unexpected increases in water demand, so it would be unreasonable not to allow some deviation from the limits and guidelines of the Judgment. Table 11 summarizes all overextractions during the 1972-73 water year.

Of the thirty-five parties listed: nine overextracted in violation of the Judgment; however, all have taken steps to eliminate their overextractions, two had requested permission and obtained approval to overextract.

The Watermaster recommends that no action be brought against these parties that overextracted as they have taken steps to eliminate their overextractions.

Findings and Determinations
by Watermaster

WITH RESPECT TO EACH PARTY LISTED ON TABLE 11 CONTAINED IN THIS PORTION OF THE REPORT ON "OVEREXTRACTIONS", THE AMOUNT SHOWN IN COLUMN 6 CONSTITUTES THE QUANTITY OF WATER IN ACRE- FEET BY WHICH THAT PARTY HAS OVEREXTRACTED GROUND WATER FROM THE CENTRAL BASIN IN EXCESS OF THE QUANTITIES PERMITTED TO IT UNDER AND PURSUANT TO THE JUDGMENT IN THE CENTRAL AND WEST BASIN WATER REPLENISHMENT DISTRICT, PLAINTIFF, VS. CHARLES ADAMS, ET AL. DEFENDANT, CASE NO. 786,656, LOS ANGELES SUPERIOR COURT. EACH SUCH PARTY'S ALLOWED PUMPING ALLOCATION FOR THE WATER YEAR 1973-74, AS SHOWN IN APPENDIX A OF THIS REPORT, IS REDUCED BY SAID QUANTITIES SHOWN IN COLUMN 6, PURSUANT TO THE PROVISIONS OF PART III, SUBPART B, PARAGRAPH 3 OF THE JUDGMENT, EXCEPT INSOFAR AS THAT PARTY HAS ORDERED AND HAS BEEN ALLOCATED EXCHANGE POOL WATER FOR THE WATER YEAR 1973-74. THE FOREGOING STATEMENTS CONTAINED IN THIS PARAGRAPH CONSTITUTE A DETERMINATION AND FINDING BY THE WATERMASTER PURSUANT TO THE PROVISIONS OF PART II OF SAID JUDGMENT

From time to time the Watermaster evaluates historical ground water production records of parties at the request of the parties or at the Watermaster's discretion. In some instances, the evaluations and findings result in minor uncontested changes in the records to the benefit of the party or vice versa.

The administration of the Judgment was hampered to a degree by the failure of a number of parties in submitting their production reports to the Central and West Basin Water Replenishment District by the prescribed date. The "General Information Policies and Procedures" bulletin, published by the Watermaster and mailed to all the parties, sets the deadline as the 15th of the month for the water pumped during the preceding month.

Carryover of Allowed
Pumping Allocation

The provision in the Judgment (Subpart A, Part III) relative to allowable carryover of unused water rights states in part: "Each party...who...does not extract...a total quantity equal to such party's Allowed Pumping Allocation for the particular water year...is permitted to carry over from such water year the right to extract from the Central Basin in the next succeeding water year so much of said total quantity as it did not extract..., not to exceed 10% of such party's Allowed Pumping Allocation, or 10 acre-feet, whichever...is the larger." (Emphasis added.)

A change in the method of computing the allowable carryover and allowable overextractions has again become necessary due to objections by certain parties.

The change reported in the 1971-72 report to become effective with the 1972-73 water year assumed that when not specifically passed to the lessee by the lease document, the amount leased was not deducted from the lessor's Allowed Pumping Allocation for computing the allowable carryover or overextraction. This caused some confusion; therefore, to obviate this, all future lease documents beginning with the 1973-74 water year must contain a statement as to which party receives the benefit of the amount leased for computing carryover or overextractions. Item (5) in Figure 7, suggested Water Right License and Agreement, shown on page 38 is sufficient for this requirement.

Court Actions 1972-73

On September 5, 1973, a motion to amend the Central Basin Judgment was heard in Department E, Southwest Branch of the Superior Court by the Honorable Judge John J. Shea. The amendment to the Judgment more particularly amended paragraphs 4(a), 10, 11, and 12 of Subpart C, Part III of the Judgment. All such amendments relate to the

a/ Computed as 2 acre-feet or 10 percent of Allowed Pumping Allocation (Column 1), whichever is larger.

b/ Advised by the Watermaster on July 27, 1973, of possible overextractions.

c/ Permission to exceed permissible overextractions requested of and approved by the Watermaster. Party has taken steps to eliminate its overextractions.

d/ Permissible overextractions computed pursuant to old procedure.

e/ Party did not request permission to exceed permissible overextractions and is in violation of the Judgment. However, it has taken steps to eliminate its overextractions.

f/ No permission to overextract by this amount in 1971-72 requested of or approved by Watermaster. Party was in violation of Judgment.

Exchange Pool Pricing policy. A complete copy of the Amendments to Judgment as ordered, adjudged and decreed on September 28, 1973, by the

Honorable Judge John J. Shea, is herein contained in Appendix D. The new pricing policy will become effective with the 1973-74 Exchange Pool program.

V. ADMINISTRATIVE COSTS

The Central Basin Area was established as a "Watermaster Service Area" in accordance with Part 4, Division 2, of the Water Code of the State of California. Therefore, as provided under Section 4201, the cost of administering the service area and the distribution of water therein is payable one-half by the State and one-half by the parties.

Cost of Watermaster Service for 1972-73

The Judgment requires that the Watermaster prepare and mail a copy of the tentative budget to each of the parties at least 60 days before the beginning of each water year. If no objections are received within 15 days after service of the tentative budget, it becomes a final budget.

The tentative budget submitted to the parties on July 31, 1972, is presented

in Table 12. There were no objections and it was adopted as the final budget on August 15, 1972.

The administrative cost chargeable to the parties was apportioned among the parties as directed by the Judgment. The Judgment provides that if the portion of the final budget payable by the parties is equal to, or less than \$5 per party, the cost shall be equally apportioned among the parties. However, if the parties' share of the budget is greater than \$5 per party, each party will be assessed a minimum of \$5 and the total amount so collected will be deducted from the parties' share of the budget. The remaining balance to be collected is then assessed among the parties in proportion to their Allowed Pumping Allocation which is in excess of 65 acre-feet.

TABLE 12. APPROVED BUDGET FOR 1972-73

^a Delayed payment, penalty assessed. A total of \$12.13 was collected in penalties.^b Was a party at the time of billing.^c Not assessed because of nonutilization of water rights within two successive water years prior to ending the 1972-73 tentative budget. See subparagraph(s) of the Judgment.

Apportionments of parties' share of the budget for the water year 1972-73 are set forth in Table 13. A five percent penalty is assessed if payments become delinquent. In this respect, 26 parties were penalized as their payments were not made within the allowable 30 days after service of the statement of the amount due. Assessments totaling \$12.13 were collected for delayed payments.

Chapter IV presents information on Exchange Pool water carryover. This provision directs the Watermaster to bill and collect from those parties having a carryover of Exchange Pool water, the difference in price per acre-foot (\$1) for Exchange Pool water when the price in the succeeding water year (\$48) exceeds the price of the previous year (\$47). A total of \$1,023.43 was collected for Exchange Pool water carried over from the

1971-72 water year to the 1972-73 water year. See Table 9 (page 37) for a detailed breakdown. These additional payments are considered miscellaneous income to the Watermaster and are applied towards that share of the Watermaster's budget to be paid by the parties.

In addition to the above-mentioned receipts, \$299.52 was collected for delayed payments in the operation of the Exchange Pool. The penalties were assessed in accordance with Exchange Pool procedures and the additional miscellaneous income thus collected was applied towards the parties' share of the budget.

Income and expenditures for watermaster service during the 1972-73 water year are shown in Table 14 below. Any credit or debit balance is carried forward into the succeeding water year.

TABLE 14. STATEMENT OF 1972-73 INCOME AND EXPENDITURES

Item	Parties	State	Parties and State
<u>Income</u>			
From 1972-73 budget	\$35,448.00	\$36,948.00	\$72,396.00

APPENDIX - D

AMENDMENTS TO JUDGMENT

SUPERIOR COURT OF THE STATE OF CALIFORNIA
FOR THE COUNTY OF LOS ANGELES

CENTRAL AND WEST BASIN WATER
REPLENISHMENT DISTRICT, etc.,

Plaintiff,

-vs-

CHARLES E. ADAMS, et al.,

Defendants.

NO. 786,656

AMENDMENTS TO JUDGMENT

CITY OF LAKEWOOD, a municipal
corporation,

Cross-Complainant,

-vs-

CHARLES E. ADAMS, et al.,

Cross-Defendants.

(Amending Paragraphs
4(a), 10, 11 and 12
of Subpart C, Part III
of Judgment, all such
amendments relating to
the "Exchange Pool")

The motion of Plaintiff, CENTRAL AND WEST BASIN WATER
REPLENISHMENT DISTRICT, pursuant to the continuing jurisdiction
of this Court as reserved in Part IV of the Judgment herein
(entered October 20, 1965 in Book 5462, page 1 of Judgments), for
amendments to Paragraphs 4(a), 10, 11 and 12 of Subpart C, Part
III, as well as for a deletion of a certain sentence in Paragraph

1 11 of said Subpart C, Part III, duly and regularly came on for
2 hearing in Department E, Southwest Branch of the above entitled
3 Court, at 9:00 o'clock A.M. on September 5, 1973 before the
4 Honorable John Shea, Judge assigned. Plaintiff was represented
5 through its attorneys, Martin E. Whelan, Jr., Inc. and Martin E.
6 Whelan, Jr. The only defendants who appeared were defendants
7 State of California, Fred C. Nelles School for Boys of the State
8 of California Department of The Youth Authority, and Metropolitan
9 State Hospital of the State of California Department of Mental
10 Hygiene, by and through their attorneys of record, Evelle J.
11 Younger, Attorney General, by Ariel C. Hilton, Deputy Attorney
12 General. Notice of hearing was properly and timely given.
13 Evidence was received on said date, and the hearing concluded
14 on said date, i.e., September 5, 1973, at which time the Court
15 announced its intended decision. It was thereupon stipulated
16 that said defendants might have ten (10) days in which to re-
17 quest Findings of Fact and Conclusions of Law, if they so
18 desired. No such request was filed within that period of time.

19 The Court, pursuant to reserved jurisdiction under Part IV
20 of said Judgment, pursuant to the original Findings of Fact and
21 Conclusions of Law, and pursuant to the evidence adduced at said
22 hearing, does hereby amend said Judgment by amending Paragraphs
23 4(a), 10, 11 and 12 of Subpart C, Part III of said Judgment as
24 follows.

25 NOW, THEREFORE, IT IS ORDERED, ADJUDGED AND DECREED
26 THAT SAID JUDGMENT ENTERED HEREIN AS THE SAME MAY HAVE BEEN
27 HERETOFORE AMENDED, IS FURTHER AMENDED IN THE FOLLOWING PAR-
28 TICULARS:

1 1. Subparagraph 4(a) of Subpart C, Part III, of said Judg-
2 ment, is hereby amended to provide in its entirety as follows,
3 with subparagraph (b) of the paragraph to be unaffected:

4 "4. Subscriptions to Exchange Pool.

5 (a) Required Subscription. Each party having ex-
6 isting facilities for the taking of imported water as of the be-
7 ginning of any water year hereby subscribes to the Exchange Pool
8 for purposes of meeting Category (a) requests thereon, as more
9 particularly defined in paragraph 5 of this Subpart C, twenty per-
10 cent (20%) of its Allowed Pumping Allocation, or the quantity of
11 imported water which it is able, without undue hardship, to obtain,
12 take and put to beneficial use through its distribution system or
13 systems existing as of the beginning of the particular water year
14 in addition to such party's own estimated needs for imported water
15 during that water year, whichever is the lesser. A party's sub-
16 scription under this subparagraph (a) and subparagraph (b) of this
17 paragraph 4 is sometimes hereinafter referred to as a 'required
18 subscription'. Each such party shall not later than November 10th
19 of each water year provide the Watermaster with such information
20 as the Watermaster shall require in order to make the computations
21 under paragraph 10 hereafter, labeled 'Price to be Paid for Ex-
22 change Pool Water', and shall at the same time, if it so desires,
23 exercise the option provided in subparagraph (b) of said para-
24 graph 10, and if not so exercised by the aforesaid date, said
25 option shall be deemed waived."

26 2. Paragraph 10 of Subpart C, Part III, of said Judgment,
27 is hereby amended to provide in its entirety as follows:

28 "10. Price to be paid for Exchange Pool Water. The

price to be paid by Exchangees and to Exchangors per acre-foot for required and voluntary subscriptions of Exchangors utilized to fill requests on the Exchange Pool by Exchangees shall be the dollar amount computed as follows:

(a) Average Price for Each Type of MWD Water. There shall be determined the average price to be charged by Central Basin Municipal Water District (CBMWD) during the water year for each type (source and degree of water treatment) of MWD (Metropolitan Water District of Southern California) water used for municipal and industrial purposes for which a separate rate is to be charged. Each such average price shall be determined from resolutions of CBMWD in effect as of the beginning of the water year. Any changes scheduled during that water year and then adopted shall be averaged with those in effect as of the beginning of the water year based on the number of months each is to be in effect during that water year.

Example:

Type of Water	Assumed Portion of Water Year	Assumed Price per Acre-foot	Percent of Water Year	Computation of Average Price for Water Year
Filtered Colorado River water	Oct.-June	\$54.00	75%	\$40.50
	July-Sept	58.00	25%	<u>14.50</u> \$55.00
Filtered and Softened Colorado River water	Oct.-June	\$58.00	75%	\$43.50
	July-Sept	62.00	25%	<u>15.50</u> \$59.00

(b) Exchangor's Weighted Average Cost. There shall be computed for each Exchangor required to make a subscription pursuant to subparagraph 4(a) above of this Part an 'Exchangor's Weighted

Average Cost' for each acre-foot, determined on the basis of the average price for each type of water use as determined in subparagraph (a) of this paragraph 10, weighted in proportion to the quantities of each type of MWD water purchased during the preceding fiscal year (July 1 - June 30) by such Exchangor, or at said Exchangor's option the quantities of each type of water so purchased during the last quarter of said fiscal year. For each Exchangor the quantities of each type of MWD water purchased will be based upon water taken at all MWD connections of that Exchangor (regardless of whether located inside or outside of Central Basin) which deliver water to integrated water systems supplying service to areas lying wholly or partly within Central Basin, provided that for any Exchangor having more than one such integrated water system wholly or partly within Central Basin, consideration shall be given only to MWD connections providing water to those individual systems having more than one-half of their service area within the boundaries of Central Basin.

Example:

Assume that, in the preceding fiscal year, a particular Exchangor used 60 percent filtered Colorado River water and 40 percent filtered and softened Colorado River water. Then at the average prices derived in the preceding example, his 'Exchangor's Weighted Average Cost' would be determined as follows:

60% of \$55.00 = \$33.00

40% of \$59.00 = \$23.60

\$56.60 ('Exchangor's Weighted Average Cost')

(c) Exchangor's Exchange Pool Price. For each Exchangor, there shall be computed the 'Exchangor's Exchange Pool Price' which shall be the 'Exchangor's Weighted Average Cost', plus the sum of \$2 per acre-foot, less the sum of \$8 per acre-foot

(representing the average incremental cost of pumping water in the Central Basin) and less any rate or rates of taxes or assessments, in effect at the beginning of the water year, levied on the pumping of ground water in Central Basin for replenishment purposes by Central and West Basin Water Replenishment District or any other governmental agency. Each 'Exchangor's Exchange Pool Price' is the amount to be paid to that Exchangor for each acre-foot of required subscription by that Exchangor utilized in filling Category (a) requests.

The \$8.00 per acre-foot figure for average incremental cost of pumping water referred to above may, on the application of any interested party, be adjusted upward or downward by the Court from time to time as a part of the Court's reservation of continuing jurisdiction.

Example:

For the Exchangor in the last preceding example, the 'Exchangor's Exchange Pool Price' would be computed as follows:

'Exchangor's Weighted Average Cost'	\$56.60
Plus	2.00
Subtotal	\$58.60
Less average incremental cost of pumping	- 8.00
Less replenishment assessment (assumed)	- 6.00
'Exchangor's Exchange Pool Price'	\$44.60

(d) Basinwide Average Exchange Pool Price. There shall be determined a 'Basinwide Average Exchange Pool Price', representing the average of the 'Exchangor's Exchange Pool Prices' for all Exchangors, weighted in proportion to the amount of each Exchangor's required subscriptions utilized in filling Category (a) requests. This 'Basinwide Average Exchange Pool Price' shall be the price per acre-foot to be paid by all Exchangees for both

Category (a) and Category (b) water, and the price to be paid to Exchangors for voluntary subscriptions utilized in filling either Category (a) or Category (b) requests.

Example:

Assume two Exchangors in Central Basin, as per following tabulation.

Required Subscription
Utilized in Filling
Category (a) Requests

Exchangor	Acre-Feet	Percent of Total	Exchangor's Exchange Pool Price	Computation of Basinwide Aver- age Exchange Pool Price
A	100	25%	\$44.60	\$11.15
B	<u>300</u>	<u>75%</u>	46.00	<u>34.50</u>
Totals	400	100%		\$45.65"

3. Paragraph 11 of Subpart C, Part III, of said Judgment, is hereby amended to provide in its entirety as follows:

"11. Carry-over of Exchange Pool Purchases by Exchanges. An Exchangee who does not extract from Central Basin in a particular water year a quantity of water equal to the total of (a) its Allowed Pumping Allocation for that particular water year, reduced by any authorized amount of carry-over into the next succeeding water year pursuant to the provisions of Subpart A of Part III of this judgment, and (b) the quantity that it purchased from the Exchange Pool for that particular water year, may carry over into the next succeeding water year the right to extract from Central Basin a quantity equal to the difference between said total and the quantity actually extracted in that water year, but not exceeding the quantity purchased from the Exchange Pool for that water year. Any such carry-over shall be in addition to that

provided in said Subpart A of Part III.

If the 'Basinwide Average Exchange Pool Price' in the next succeeding water year exceeds the 'Basinwide Average Exchange Pool Price' in the previous water year any such Exchangee exercising such carry-over rights hereinabove provided shall pay to the Watermaster, forthwith upon the determination of the 'Basinwide Average Exchange Pool Price' in said succeeding water year, and as a condition to such carry-over rights, an additional amount determined by multiplying the number of acre feet of carry-over by the difference in 'Basinwide Average Exchange Pool Price' as between the two water years. Such additional payment shall be miscellaneous income to the Watermaster which shall be applied by him against that share of the Watermaster's budget to be paid by the parties to this Agreement for the second water year succeeding that in which the Exchange Pool water was so purchased. For purposes of this subparagraph, the price of Exchange Pool water for the water year 1972-73, pursuant to paragraph 10 of this judgment as originally entered, shall be deemed the 'Basinwide Average Exchange Pool Price' for that water year."

4. Paragraph 12 of Subpart C, Part III, of said Judgment, is hereby amended to provide in its entirety as follows:

"12. Notification by Watermaster to Exchangors and Exchangees of Exchange Pool Requests and Allocations Thereof and Price of Exchange Pool Water. Not later than December 15 of each water year the Watermaster shall determine and notify all Exchangors and Exchangees of the total of the allocated requests for Exchange Pool water and shall provide a schedule divided into categories of requests showing the quantity allocated to each

1 Exchangee and a schedule of the allocation of the total Exchange
2 Pool requirements among the Exchangors. Such notification shall
3 also advise Exchangors and Exchangees of the prices to be paid to
4 Exchangors for subscriptions utilized and the Basinwide Average
5 Exchange Pool Price for that water year as determined by the
6 Watermaster. The determinations of the Watermaster in this regard
7 shall be subject to review by the Court in accordance with the
8 procedure set forth in Part II of this judgment."

9 5. No party shall recover its costs herein from any other
10 party.

11 THE CLERK WILL FILE AND ENTER THESE "AMENDMENTS TO
12 JUDGMENT" IN THE JUDGMENT BOOK FORTHWITH.
